

NATIONAL DRUG FILE (NDF)

User Manual

Version 3.18

September 1998

Department of Veterans Affairs
Software Service
Clinical Ancillary Product Line

Important Note

National Drug File (NDF) data is continuously updated as new information is received. This updated information is released periodically via hardcopy and on the NDF homepage. The homepage can be accessed via VA's intranet at the following address:

http://www.vista.med.va.gov/softserv/clin_nar.row/pharmndf/index.html

Please report any errors, inconsistencies, or omissions to the Pharmacist for NDF, Patsy Barnett. Her e-mail address is: barnett.patsy@forum.va.gov. Phone number for Mrs. Barnett at the Birmingham IRMFO is 205/290-7127, or FAX 205/290-7002.

Preface

The National Drug File (NDF) software is a Decentralized Hospital Computer Program (DHCP) application designed to provide a systematic management approach to the classification of all medications, including investigational and over-the-counter drugs, prosthetic items, and expendable supplies, throughout the Veterans Health Administration (VHA) medical facilities. The software allows information from the NATIONAL DRUG file to be merged into the local facility's production DRUG file, thereby providing a method of non-intrusive standardization of the production DRUG file in all VHA medical facilities.

Version 3.1 of the User Manual is designed to acquaint pharmacists and their staff members with the features of Version 3.1 of the National Drug File software, and to introduce them to enhancements in the program.

Introduction to the User Manual

How this Manual is Organized

This manual contains pre-installation preparation instructions for the package coordinator and pharmacy staff, as well as descriptions of all the menu options.

The main body of the User Manual is divided into two sections: Pre-Installation Preparation and Menu Options. The chapters of the Menu Options section are organized to follow the order of the National Drug File menus. Each of these chapters contain an overview and detailed examples.

Overview: The overview sections are designed to give you a general understanding of the specific option discussed in the chapter.

Detailed Example: Each chapter has one or more examples representing actual terminal dialogue.

Special Notations

The following notations are used in this manual:

Description	Notation
Return key	<RET>
User response on computer-screen example	Underlined. After a user response on a screen example, <RET> is implied.
Editor's note	Inside square brackets: []
Explanation interrupting computer-screen example	Inside square brackets: [], and bold

Reference Material

The appendices contain several reference sections that provide helpful background for using the NDF software. For updated appendices, please refer to documentation residing on NDF's homepage on the VA Intranet at

http://www.vista.med.va.gov/softserv/clin_nar.row/pharmndf/index.html.

Special Instructions for the First-Time User

If you are unfamiliar with the DHCP software applications, we recommend that you study the *DHCP Users Guide to Computing*. This orientation guide is a comprehensive handbook benefiting first time users of any DHCP application. The purpose of the introductory material is to help you become familiar with basic computer terms and the components of a computer. It is reproduced and distributed periodically by the Kernel Development Group. To request a copy, contact your local IRM staff.

Change Pages

Future modifications to the software may require changes to the documentation. Change pages will contain the new version number and date in the footer. Vertical lines in the margin can also be used to further highlight changes on a page.

Related Documents

The National Drug File documentation is comprised of five parts as follows. These manuals are written as modular components and can be distributed independently.

NDF Document	Who Uses It
National Drug File V. 3.1 User Manual	for application coordinators and Pharmacy staff.
National Drug File V. 3.1 Technical Manual	for application coordinators, site managers, and Information Resource Management (IRM) staff.
National Drug File V. 3.1 Installation Guide	for site managers and IRM staff.
Release Notes	for site managers and IRM staff.
Package Security Guide	for site managers and local Information Security Officers (ISOs).

Introduction to NDF Software

The National Drug File (NDF) software is a Decentralized Hospital Computer Program (DHCP) module that appends data for a drug from the National Drug File to the existing data for that drug in the local VA facility's DRUG file. After the conversion is complete, the local DRUG file will have similar characteristics to DRUG files at other VA medical facilities. When a drug has been matched, verified, and merged with a drug in the National Drug File, an "ND" node, which links the local DRUG file entry to the entry in the National Drug File, is created. This node contains the following fields:

- 1) NATIONAL DRUG FILE ENTRY
- 2) VA PRODUCT NAME
- 3) PSNDF VA PRODUCT NAME ENTRY
- 4) PACKAGE SIZE
- 5) PACKAGE TYPE
- 6) NATIONAL DRUG CLASS

These fields are read-only fields and cannot be edited through VA FileMan.

If version 5.6, or later, of the Outpatient Pharmacy package has been installed, the VA CLASSIFICATION field (Field 2) in the local DRUG file contains the VA Drug Class Code. Drugs must be matched, verified, and merged in version 3.0 before version 3.1 is installed.

The NDF software provides a method of non-intrusive standardization of the local DRUG files in all VA medical facilities. Standardization includes the adoption of new drug nomenclature and drug classification system-wide. The NDF software will lay the foundation for a database for sharing drug product information system-wide.

The VA Drug Classification System

The Department of Veterans Affairs Drug Classification system was developed to provide a systematic management approach to the classification of medications, including investigational and over-the-counter drugs, prosthetic items, and expendable supplies. The system was designed to

- ◆ support the inpatient and outpatient pharmacy activities;
- ◆ facilitate the identification of drug-drug, drug-allergy, drug-lab, and drug-food interactions;
- ◆ uphold the requirements for inventory accountability;
- ◆ substantiate and improve all patient medication-related activity;
- ◆ provide an improved database to assist the health care provider;
- ◆ provide a coordinated method of database communication for VA management;
- ◆ facilitate the monitoring of investigational drugs; and
- ◆ facilitate the control of prosthetic and supply items.

Each five-character alpha-numeric code specifies a broad classification and a specific type of product. The first two characters are letters and form the mnemonic for the major classification (e.g., AM for antimicrobials). Characters 3 through 5 are numbers and form the basis for subclassification. For example, the classification system for the penicillins is as follows:

AM000 ANTIMICROBIALS

AM050 Penicillins

AM051	Penicillin-G	Related	Penicillins
AM052	Penicillins,	Amino	Derivatives
AM053	Penicillinase-Resistant		Penicillins
AM054	Extended Spectrum Penicillins		

The VA Drug Classification system classifies drug products, not generic ingredients. Drug products with local effects are classified by route of administration (e.g., dermatological, ophthalmic). If a product is not classified by route of administration, in most cases, it is classified under a specific chemical or pharmacological classification (e.g., beta-blockers, cephalosporins). If a product is not classified by route of administration, or chemical or pharmacological subclassification, it may be classified under a therapeutic category (e.g., antilipemic agents, antiparkinson agents).

Most combination products are found in the “other” subclassification under each major classification unless a specific subcategory for combination products has been added or a descriptive comment indicates inclusion elsewhere. In addition, products which are not adequately described by a minor category or subcategory within the major classification are classified as “other” (e.g., metronidazole and vancomycin are classified as “Anti-Infectives, Other”).

Additional information is provided in “VA Drug Classification System” in Appendix C of this manual.

Menu Options

The National Drug File software contains the following menu options, which are described in detail and illustrated in the Menu Options section of this manual:

- 1.0 Match Local Drug File with National File
- 2.0 Verify Matches
- 3.0 Rematch / Match Single Drugs
- 4.0 Verify Single Match
- 5.0 Merge National Drug File Data into Local File
- 6.0 National Drug File Reports Menu
 - 6.1 Local Drug File Report
 - 6.2 Report of VA Generic Names From National Drug
 - 6.3 Report of Attempted Match Drugs
 - 6.4 VA Product Names Matched Report
 - 6.5 Local Drugs with No VA Drug Class Report
 - 6.6 VA Drug Classification
 - 6.7 NDF Info From Your Local Drug File
 - 6.8 Supply (XA000) VA Class Report

- 6.9 Manually Classed Drugs Report
 - 6.10 Local Drugs With NO Match to NDF Report
 - 6.11 Formulary Report * **LOCKED: PSNMGR**
 - 7.0 Automatic Match of Unmatched Drugs
 - 8.0 Inquire to Local Drug File
 - 9.0 Lookup National Drug Info In Local File
 - 10.0 Allow Unmatched Drugs to be Classed* **LOCKED: PSNMGR**
- | Print a PMI Sheet

Package Management

This package does not impose any additional legal requirements on the user, nor does it relieve the user of any legal requirements. Please refer to the File Security section of the National Drug File V. 3.1 Package Security Guide for additional information on file security, potential problems that may occur, and precautions to prevent malfunctions.

It is important that you read the pre-installation chapter before proceeding to use the National Drug File software.

Version 3.1 Enhancements

1. This version contains additional data.
2. The Formulary Report under the National Drug File Reports Menu has been enhanced.
3. Local Drugs with NO Match to NDF Report is an enhancement report.
4. Lookup National Drug Info In Local File is an enhancement report.

Menu Diagrams

National Drug File Menu *without* PSNMGR Key

The following options are available to the user not assigned the PSNMGR key:

- 1.0 Match Local Drug File With National File
- 2.0 Verify Matches
- 3.0 Rematch / Match Single Drugs
- 4.0 Verify Single Match
- 5.0 Merge National Drug File Data Into Local File
- 6.0 National Drug File Reports Menu
 - 6.1 Local Drug File Report
 - 6.2 Report of VA Generic Names From National Drug
 - 6.3 Report of Attempted Match Drugs
 - 6.4 VA Product Names Matched Report
 - 6.5 Local Drugs With No VA Drug Class Report
 - 6.6 VA Drug Classification
 - 6.7 NDF Info From Your Local Drug File
 - 6.8 Supply (XA000) VA Class Report
 - 6.9 Manually Classed Drugs Report
 - 6.10 Local Drugs With NO Match to NDF Report
- 7.0 Automatic Match of Unmatched Drugs
- 8.0 Inquire To Local Drug File
- 9.0 Lookup National Drug Info In Local File
- 10.0 Print a PMI Sheet

National Drug File Menu *with* PSNMGR Key

The following options are available to the user(s) assigned the PSNMGR key:

- 1.0 Match Local Drug File with National File
- 2.0 Verify Matches
- 3.0 Rematch / Match Single Drugs
- 4.0 Verify Single Match
- 5.0 Merge National Drug File Data into Local File
- 6.0 National Drug File Reports Menu
 - 6.1 Local Drug File Report
 - 6.2 Report of VA Generic Names From National Drug
 - 6.3 Report of Attempted Match Drugs
 - 6.4 VA Product Names Matched Report
 - 6.5 Local Drugs with No VA Drug Class Report
 - 6.6 VA Drug Classification

- 9.0 Lookup National Drug Info In Local File
- 10.0 Allow Unmatched Drugs to be Classed* **LOCKED: PSNMGR**
- 11.0 Print a PMI Sheet

Pharmacy Pre-Installation Preparation

Entering National Drug Codes

The National Drug File (NDF) software uses National Drug Codes (NDCs) in an initial automatic process of matching a drug in the local DRUG file with a drug in the National Drug File. It is important to make sure that as many drugs as possible have been assigned their correct NDCs. The "Resource Materials" appendix (Appendix F) lists resource books that contain current NDCs.

The more complete and accurate the NDC fields in the local DRUG file, the more effective the automatic matching process. For more information on the automatic matching process, refer to the Menu Options section of this Manual.

It is important that you enter all National Drug Codes (NDCs) in the local DRUG file **before** the IRM staff installs this version of the software. The correct NDC format is:

Manufacturer code	-	Product code	-	Package	code
(1 - 6 characters)		(1 - 4 characters)		(1 - 2 characters)	

The correct NDC format is: 4-4-2, 5-3-2, 5-4-1, or 5-4-2 (e.g., 0023-2323-01)

Please note that the software **will not** insert the dashes in the NDC for you; therefore, you must include the dashes when you enter the information.

EXAMPLE: Enter NDCs in Field 31 Using VA FileMan

Select VA FileMan option from your main menu.

Select	VA	FileMan	Option:	<u>ENTER</u>	OR	EDIT	ENTRIES
INPUT TO WHAT FILE: <u>50</u> (Drug)							
EDIT WHICH FIELD: <u>31</u> (NDC)							
THEN EDIT FIELD: <u><RET></u>							
Select	GENERIC		NAME:			<u>NORPACE</u>	
1	NORPACE		DISOPYRAMIDE		CAP		100MG
2	NORPACE		DISOPYRAMIDE		CAP		150MG
CHOOSE	1-2:		<u>1</u>		DISOPYRAMIDE	CAP	100MG
NDC:							<u>0023-2323-01</u>
Select GENERIC NAME:							

EXAMPLE: Enter NDCs in Field 31 without VA FileMan Access

Select Outpatient Pharmacy Manager Option: **DRUG** ENTER/EDIT

Select	Generic	Name:						<u>NORPACE</u>
1	NORPACE		DISOPYRAMIDE		CAP			100MG
2	NORPACE		DISOPYRAMIDE		CAP			150MG
CHOOSE	1-2:		<u>1</u>		DISOPYRAMIDE	CAP		100MG
Generic	Name:		DISOPYRAMIDE	100MG	CAP		replace	<u>^NDC</u>
NDC:								<u>0023-2323-01</u>
Warning Labels:								
Select GENERIC NAME:								

How to Use the Options

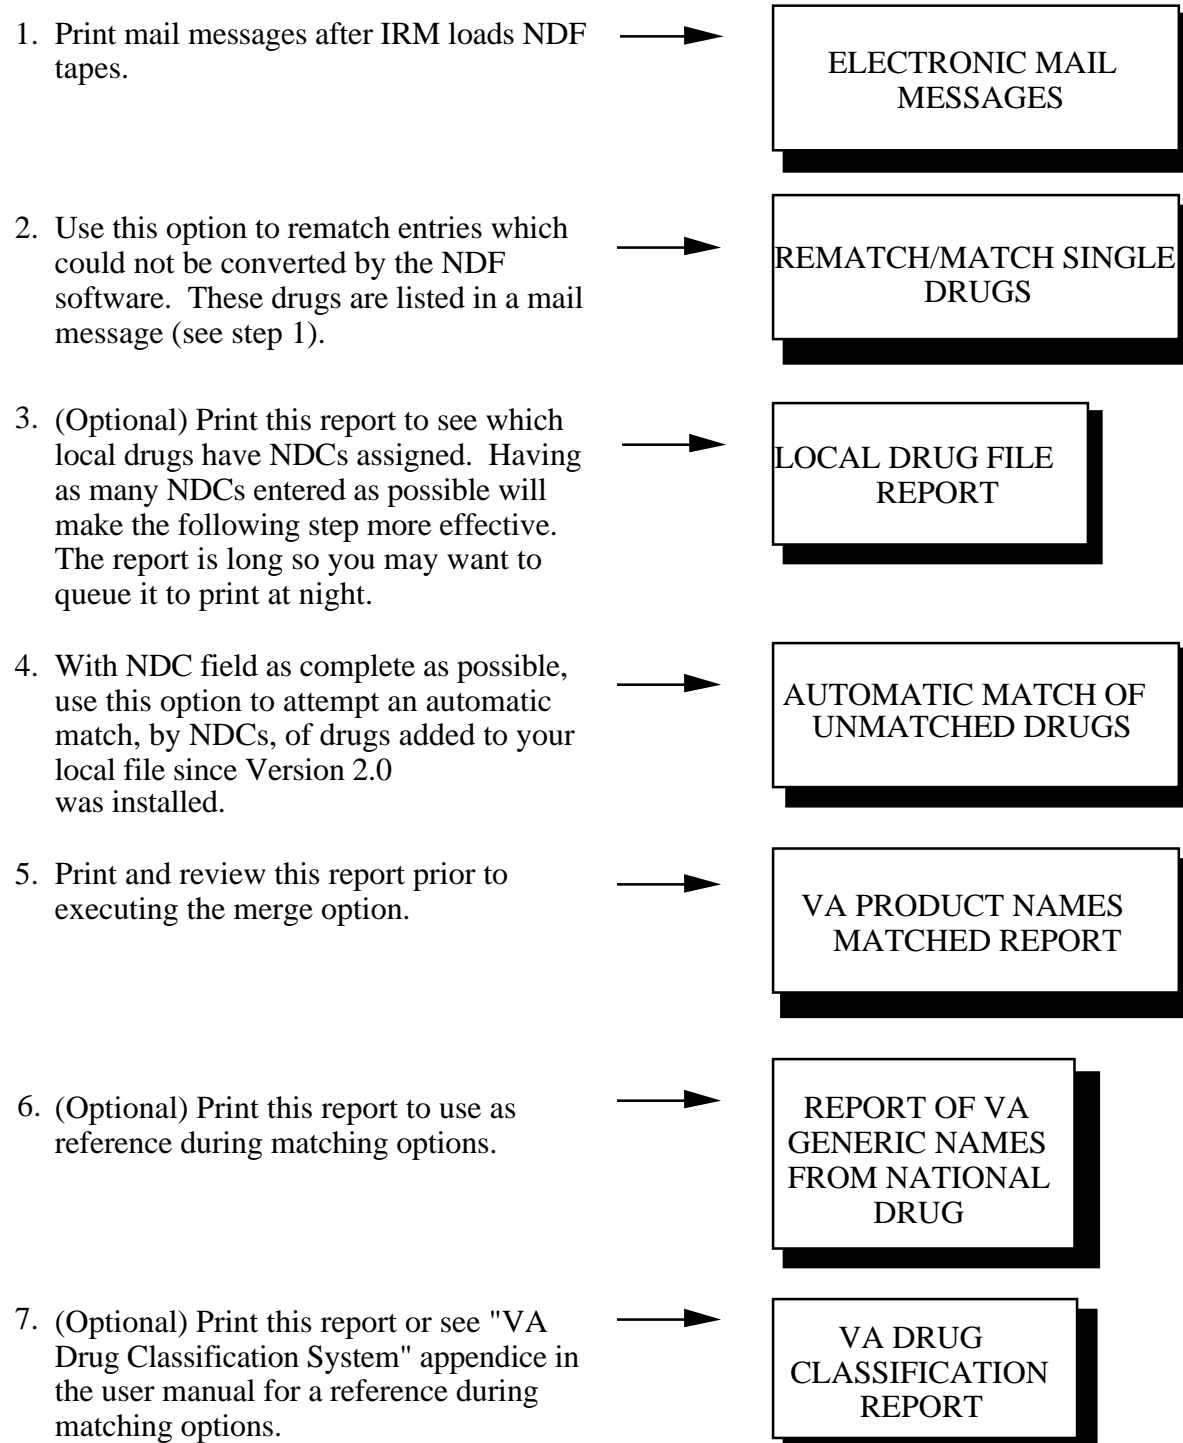

List of Menu Options

The National Drug File [PSNMGR] software contains the following menu options which are described in detail and illustrated in this chapter:

- 1.0 Match Local Drug File with National File [PSNBLD]
- 2.0 Verify Matches [PSNVFY]
- 3.0 Rematch / Match Single Drugs [PSNDRUG]
- 4.0 Verify Single Match [PSNVER]
- 5.0 Merge National Drug File Data into Local File [PSNMRG]
- 6.0 National Drug File Reports Menu [PSNSUBM]
 - 6.1 Local Drug File Report [PSNLDG]
 - 6.2 Report of VA Generic Names From National Drug [PSNVAGN]
 - 6.3 Report of Attempted Match Drugs [PSNEXC]
 - 6.4 VA Product Names Match Report [PSNPFN]
 - 6.5 Local Drugs with No VA Drug Class Report [PSNOCLS]
 - 6.6 VA Drug Classification [PSNCLS]
 - 6.7 NDF Info From Your Local Drug File [PSNRPT]
 - 6.8 Supply (XA000) VA Class Report [PSNSUPPLY]
 - 6.9 Manually Classed Drugs Report [PSNMCLS]
 - 6.10 Local Drugs With NO Match to NDF Report
 - 6.11 Formulary Report [PSNFRMLY]* **LOCKED: PSNMGR Key**
- 7.0 Automatic Match of Unmatched Drugs [PSNAUTO]
- 8.0 Inquire to Local Drug File [PSNVIEW]
- 9.0 Lookup National Drug Info In Local File
- 10.0 Allow Unmatched Drugs to be Classed [PSNSTCL]* **LOCKED: PSNMGR Key**
- 11.0 Print a PMI Sheet

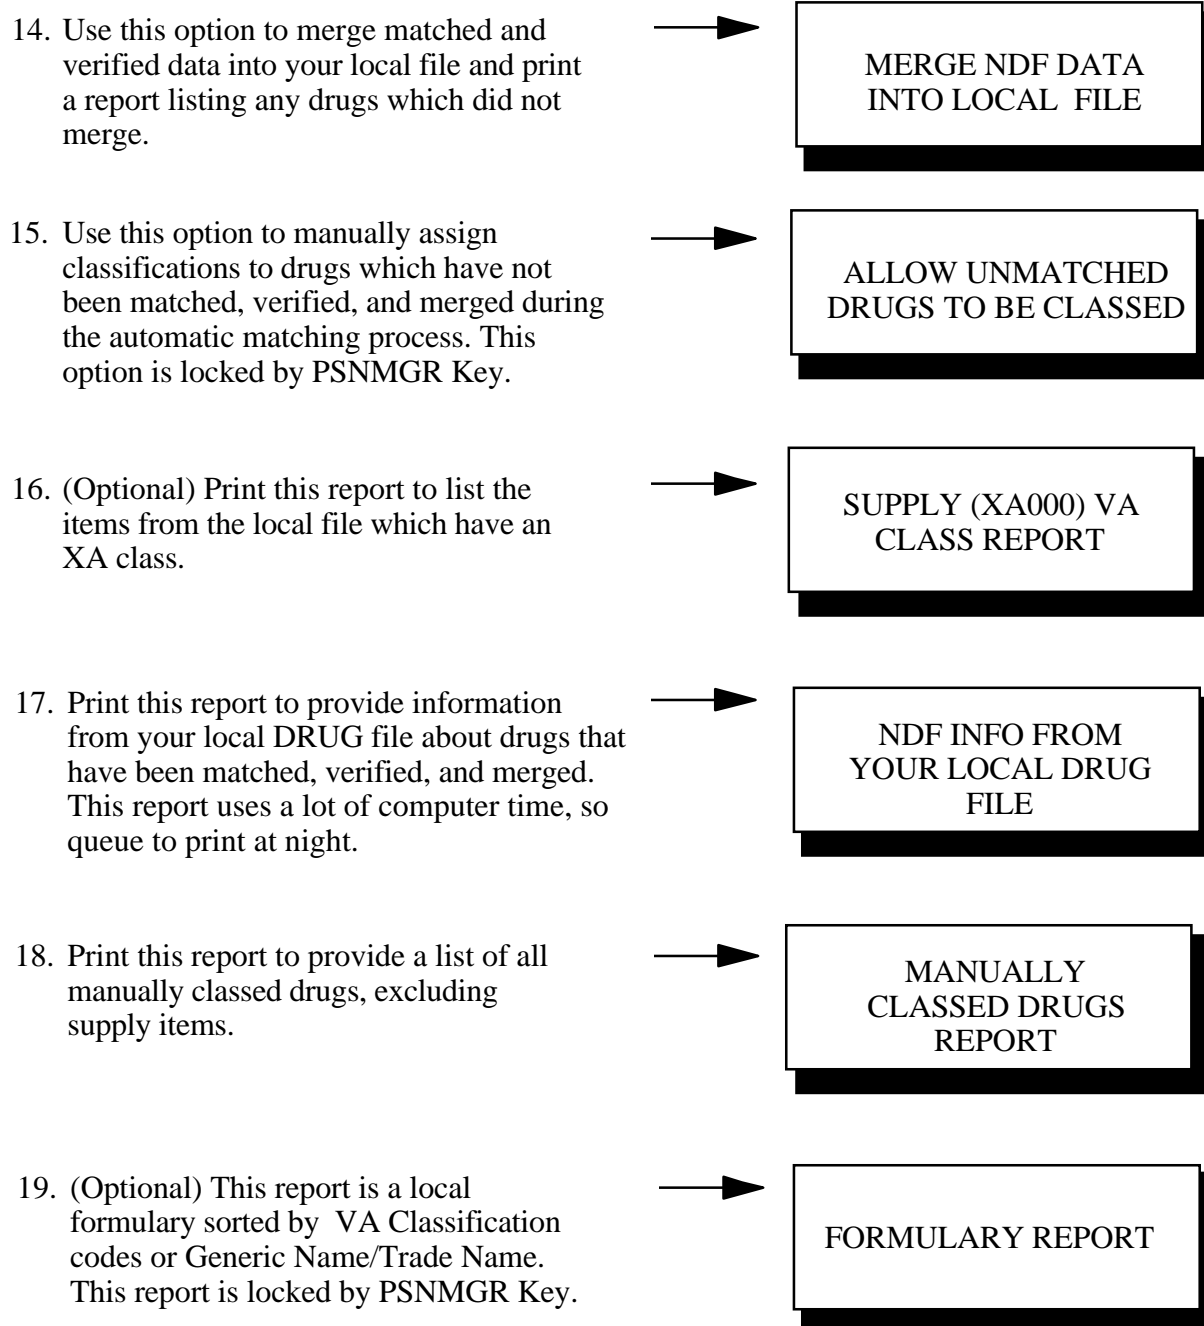

Workflow Chart

NDF V. 3.1 Must be Matched, Verified, and Merged

- | | | |
|--|---|--|
| 8. Use this option to verify matches. Both automatic and manual matches must be verified. Drugs can be rematched during the verification process. | → | VERIFY MATCHES |
| 9. Use this option to merge matched and verified data into your local file (i.e., DRUG file) and print a report of drugs that did not merge. | → | MERGE NDF DATA
INTO LOCAL FILE |
| 10. Print this report to provide a list of all manually classed drugs, excluding supply items. | → | LOCAL DRUGS WITH NO
VA DRUG CLASS
REPORT |
| 11. Print this report to see which local active drugs could not be matched to NDF and require a VA Classification code. | → | MANUALLY
CLASSED DRUGS
REPORT |
| 12. Use either option to match drugs which were not automatically matched. Use <i>Match Local Drug File with National File</i> option to loop through all unmatched drugs; use <i>Rematch/Match Single Drug</i> option to enter name of single drug to be matched. | → | MATCH LOCAL DRUG
FILE WITH
NATIONAL FILE
or
REMATCH/MATCH
SINGLE DRUG |
| 13. Use either of these options to verify matches, depending on whether you want to verify all unverified drugs or only specific ones. Both automatic and manual matches must be verified. Drugs can be rematched during the verification process. | → | VERIFY MATCHES
or
VERIFY SINGLE MATCH |

Workflow Chart (continued)

Summary of Menu Options

National Drug File Menu [PSNMGR]

Main menu

Match Local Drug File With National File [PSNBLD]

This option matches drugs in the local file with drugs in the national file. When it is first run it matches drugs automatically by NDC number. After that it allows you to match each unmatched drug manually. Matches do not all have to be made at one time. Enter “^” to exit this option during manual matching process.

Verify Matches [PSNVFY]

This option allows you to verify each unverified drug that has been matched. It is not necessary to verify all matches at one time. This option can be used any time after drugs from the local DRUG file have been matched with drugs in the National Drug File. It is a requirement that all matched drugs be verified before being merged.

Rematch / Match Single Drugs[PSNDRUG]

This option allows you to rematch entries which were incorrectly matched or match entries which could not be matched automatically. It should be used to match any new drug added to the local DRUG file. Unlike the other matching options, this option allows supply items to be matched.

Verify Single Match[PSNVER]

This option allows you to verify a single drug that has been matched rather than going through the entire list of matched, unverified drugs. It is a requirement that all matched drugs be verified before being merged.

Merge National Drug File Data Into Local File[PSNMRG]

This option merges the matched/verified data from the NATIONAL DRUG TRANSLATION file into the local DRUG file. As the merge occurs, the software prints a report listing any drugs in the NATIONAL DRUG TRANSLATION file that were not merged, referred to as errors to the merge. Thus, the report is called the Error Report.

National Drug FileReports Menu[PSNSUBM]

This option is a sub-menu which contains all the report options in the National Drug File package.

Local Drug File Report [PSNLDG]

This option generates a report containing selected information about drugs in the local DRUG file. The report prints the local drug name, inactive date, NDC, and any assigned DEA (Drug Enforcement Agency) / Special Handling code(s). This report can be used to determine which drugs have NDCs assigned to them.

Report of VA Generic Names from National Drug [PSNVAGN]

This option provides a report of VA generic names from the National Drug File. Generic names are listed alphabetically by ingredient, (e.g., the VA generic name for Fiorinal with Codeine #3 would be Aspirin/Butalbital/ Caffeine/Codeine). You may print all or a user-specified range of names. This report may be useful during the match and verify options. If a match cannot be found and you are asked to enter a VA generic name, you may use this list to find the correct VA generic name.

Report of Attempted Match Drugs [PSNEXC]

This option generates a report listing all drugs for which an attempted match could not be made. This is a cumulative report and will include all unmatched entries from the very beginning of the matching process until each drug is manually classed. Once a drug has been manually classed, it is automatically deleted from the report.

VA Product Names Matched Report [PSNPFN]

This option generates a report listing all drugs that have been matched. The report is not cumulative and will not include entries that have been merged into the local DRUG file.

Local Drugs With No VA Drug Class Report [PSNOCLS]

This option generates a report listing drugs from the local DRUG file which have no drug classification. It will print only the active drugs in the file.

VA Drug Classification [PSNCLS]

This option generates a report listing all VA Drug Classification Codes. The classification descriptions can also be printed in the report. The report can be printed for all drug classifications or a range of classifications.

NDF Info From Your Local Drug File [PSNRPT]

This option generates a report containing information for a user-specified range of local generic names of drugs or for all drugs that have been merged. The report contains data that is stored in the NDF fields of the local DRUG file. Any drug entries that do not contain NDF information (i.e., the drug has not been matched, verified, and merged) will be ignored.

Supply (XA000) VA Class Report [PSNSUPPLY]

This option generates a report listing all the items from the local DRUG file which have an "XA" VA Drug Classification. It will print only the active items in the file, and will sort by local DRUG file generic name.

Manually Classed Drugs Report [PSNMCLS]

This report will give an alphabetic listing, by local generic name, of the drugs from the local DRUG file which are active and have been assigned a VA Drug Classification through the option *Allow Unmatched Drugs To Be Classed*. This report will exclude supply items that have been assigned an "XA" class.

Local Drugs With NO Match to NDF Report [PSNONDF]

This report provides a list of drugs from the local DRUG file that are active and have no match to the National Drug File. This option should be run after executing the menu option Merge National Drug File Into Local File.

Formulary Report [PSNFRMLY] *LOCKED BY PSNMGR KEY*

This option prints a report of drugs marked as formulary in the local DRUG file. It will also print the synonyms not marked as quick codes for these formulary drugs. You may print by tradename/generic name or by VA Drug Class code.

Automatic Match of Unmatched Drugs [PSNAUTO]

This option can be used if V. 2.0 is installed and the local file has been matched, verified, and merged. V. 3.1 has an updated data base. This option allows automatic matching by NDC of newer FDA-released drugs to drugs in the local file which are manually classed or have no VA Class assigned.

Inquire To Local Drug File [PSNVIEW]

This option allows you to view the local DRUG file by Generic Name/Synonym or VA Drug Class Code. If VA Drug Class Code is chosen, the software will sort by the least expensive price in the PRICE PER DISPENSE UNIT field. It will display the GENERIC NAME, NATIONAL DRUG CLASS, PRICE PER DISPENSING UNIT, and the MESSAGE field. Only active formulary drugs can be viewed.

Lookup National Drug Info In Local File [PSNLOOK]

This option allows you to look up entries in your local DRUG file. It will display National Drug File match information.

Allow Unmatched Drugs To Be Classed [PSNSTCL] *LOCKED BY PSNMGR KEY*

This option allows unmatched drugs to be classed, including investigational drugs, drugs manufactured on site, and other items that cannot be classed using other options. All active, unmerged drugs may be classed using a looping process, or they may be classed one drug at a time with the user entering generic name or internal number. The class of a merged drug cannot be changed using this option. The option *Rematch / Match Single Drugs* must be used to change the class of a merged drug.

Print a PMI Sheet [PSNPPIP]

This patch creates an option and a routine to print Patient Medication Information Sheets. It also creates the file to hold the Information Sheets and a new global ^PSPPI where this data is stored. The option is added to the National Drug File menu, but it can be assigned independently.

Option Descriptions

1.0 Match Local Drug File with National File [PSNBLD]

This option is used to build and store information in the NATIONAL DRUG TRANSLATION file. The software proceeds through the local DRUG file and attempts to match each drug with a drug in the National Drug File (NDF).

After the NDF software has been initialized, you **may not** delete any drug from the local DRUG file; however you can inactivate any drug that you do not wish the NDF software to attempt to match by using the *Drug Enter/Edit* option in the Outpatient Pharmacy software.

EXAMPLE: How to Change Inactive Date Using Outpatient Drug Enter/Edit

Select Outpatient Pharmacy Manager Option: DRUG ENTER/EDIT

Select	Generic	Name:				<u>NORPACE</u>
1	NORPACE	DISOPYRAMIDE		100MG		CAP
2	NORPACE	DISOPYRAMIDE		150MG		CAP
Choose 1-2:	<u>1</u>	DISOPYRAMIDE		100MG		CAP
Generic Name:		DISOPYRAMIDE	100MG	CAP	replace	<u>^INACTIVE</u>
INACTIVE		DATE:				<u>01/01/92</u>
MESSAGE:		<u>^</u>				

When *Match Local Drug File With National Drug File* is run, entries in the local DRUG file are matched in consecutive order, beginning with the first drug entered in the file. The software will not attempt to match any inactive drug in the local DRUG file, and will continue to ignore the drug until the inactive date is either deleted or set to a date greater than the date on which you are attempting to match the drug. If you reactivate an inactive drug, you will be prompted to match and verify each reactivated drug and the software will automatically merge the drug with the National Drug File.

Drugs in the local file can be matched with drugs in the National Drug File by either automatic or non-automatic matching.

Automatic Matching

The first time this option is selected, the software will attempt to automatically match drugs from the local DRUG file with drugs in the National Drug File using National Drug Codes (NDCs). Before the automatic matching process begins, you will be asked if you wish to begin the AUTOMATIC MATCH BY NDC process. If you enter "Y" (YES), the automatic matching process will begin and you will proceed as described in the example following this section. If you enter "N" (NO), or <RET>, you will exit from the option.

It is extremely important to assign the correct NDC to as many drugs as possible in the local DRUG file. A complete and accurate NDC field in the local DRUG file (Field 31) will speed the overall matching process. If an NDC in the local DRUG file matches an NDC in the national file, a match will be made unless the local drug entry contains an inactive date. The automatic matching process will not attempt to match any drug with an inactive date and will ignore this

drug until the inactive date is deleted or set to a date greater than the date on which you are attempting to match the drug. The automatic matching process will not screen on the contents of the DEA/SPECIAL HANDLING field in the local DRUG file. Any mismatches that may occur from the automatic matching process should be corrected using *Rematch / Match Single Drugs* or *Verify Matches* options.

Automatic matching occurs **only** the first time the option is executed and **is not** repeated. To obtain a list of drugs matched during the automatic matching process, exit the option at the conclusion of the matching process and use *VA Product Names Matched Report* option. Review this report for correctness of matches. Since the report is requested immediately after the automatic matching, only the drugs that have been automatically matched will be included and will be shown as non-verified matches. These matches must be verified and merged.

EXAMPLE: Automatic Match by NDC

Select National Drug File Menu Option: **1** Match Local Drug File With National File

Automatic match by NDC Code process will begin

Are you sure you want to continue ? N/**Y**.....
.....

At the conclusion of the automatic matching, the software returns to the first drug (by internal number) that was not matched in the file and begins the non-automatic matching process.

Non-Automatic Matching

The software will not attempt to match any inactive drug in the local DRUG file. It will continue to ignore this drug until the inactive date is deleted. If you reactivate an inactive drug, you will be prompted to match and verify the drug. Once the drug is matched and verified, the software will automatically merge the drug with the National Drug File.

For non-automatic matching the software will check the contents of the DEA/SPECIAL HANDLING field in the local DRUG file to determine if one of the following values exists in the field:

0 (zero)	-Manufactured	in	Pharmacy
I	-Investigational		Drug
M	-Bulk Compound Item		

This option will not allow you to match any drug that has one of these values in the DEA/SPECIAL HANDLING field. It will bypass that drug and proceed to the next entry in the local file. A message indicating that the drug is one of the types listed above, and therefore cannot be matched, will be displayed.

EXAMPLE: Message that Drug Cannot be Matched

ACETIC ACID 1/2% IRRIGATION (1000ML) IS A MANUFACTURED IN PHARMACY ITEM
AND CANNOT BE MATCHED!
SLOW K (FOR CSP 290) IS AN INVESTIGATIONAL DRUG
AND CANNOT BE MATCHED!
ACACIA POWDER IS A BULK COMPOUND ITEM
AND CANNOT BE MATCHED!

After the software has determined that the drug is active and the DEA/SPECIAL HANDLING field does not contain 0, I, M, or S, it will use the first word of the local drug name in an attempt to match that drug with a drug in the National Drug File. If the first character of the first word is non-alpha, the software will attempt a match using the second word in the local drug name. If no match is made, the software will attempt a match using the longest word in the local drug name.

EXAMPLE: Match by First Word

```
Match local drug BROMPHENIRAMINE 12MG T.R.T.          with
                ORDER UNIT: BT
                DISPENSE UNITS/ORDER UNITS: 500
                DISPENSE UNIT: TABLET
1 BROMPHENIRAMINE MALEATE 10MG/ML INJ   INJ,SOLN AH400
2 BROMPHENIRAMINE MALEATE 12MG TAB,SA   TAB,SA AH400
3 BROMPHENIRAMINE MALEATE 2MG/5ML ELIXIR ELIXIR AH400
4 BROMPHENIRAMINE MALEATE 4MG TAB   TAB AH400
5 BROMPHENIRAMINE MALEATE 8MG TAB,SA   TAB,SA AH400
Enter your choice: 2
    Is this a match < Reply Y, N or press return to continue > :Y

< Enter "Y" for yes >
< Enter "N" for no >
< Press return for next drug or "^" to quit>    OK? : Y
```

Because the software is attempting this match for you, there may be a totally unrelated product displayed for you to accept. If this is the case, answer "N" (No) at the prompt and continue the matching by either entering an NDC or going to the VA GENERIC NAME prompt and entering the generic name. A list of generic names contained in the National Drug File can be printed using *Report of VA Generic Names From National Drug*. This list will be helpful during the matching process.

EXAMPLE: Incorrect Match Suggested by Computer

```
Match local drug  SODIUM CHLORIDE 2% OPH SOLN (15ML)                with
                                ORDER UNIT: BT
                                DISPENSE UNITS/ORDER UNITS: 1
                                DISPENSE UNIT:

Match on first word failed, attempting to match longest word:
TRACE METALS ADDITIVE INJ
    Is this a match  < Reply Y, N or press return to continue > :  N

Unable to match . . . enter NDC Code <WITH DASHES>:  <RET>
Unable to match by Name, Trade Name or NDC Code
Select NATIONAL DRUG VA GENERIC NAME:
```

If no match is made using the first or longest words, the software will search the local DRUG file for a trade name from the SYNONYM field for the drug to attempt to match with a trade name in the National Drug File. If multiple trade names are found, all trade names will be displayed and you must select one.

EXAMPLE: Match by Trade Name

```
Match local drug  FLURESS 0.25% OPH SOLN (5ML)
                                ORDER UNIT: BT
                                DISPENSE UNITS/ORDER UNITS: 1

< Enter "Y" for yes >
< Enter "N" for no >
< Press return for next drug or "^" to quit>                OK? :  Y
```

In some cases the drug will match, but the package size or type will not. In this case just select the last option, "NONE OF THE ABOVE," by entering "NONE." This will cause the PACKAGE SIZE or PACKAGE TYPE field to read "OTHER." If package size is "OTHER," package type will automatically become "OTHER." You will not be asked to choose a package type in this case. Package type can be "OTHER" when package size is specified, but not vice versa.

EXAMPLE: Package Size Does Not Match

```
Match local drug  MITHRAMYCIN 2.5MG/VI INJ
                                ORDER UNIT: BX
                                DISPENSE UNITS/ORDER UNITS: 10
                                DISPENSE UNIT: VI

< Press return for next drug or "^" to quit>          OK? : Y
```

When a match is made using the first word, longest word, or existing trade name(s), the generic name of the local drug is displayed with the possible match(es) from the NDF as the VA Product Name(s). If there is more than one choice, each will be listed with the Dosage Form and VA Class listed beside it.

EXAMPLE: Multiple VA Product Names

```
Match local drug  SCOPOLAMINE 400MCG/ML (1ML)          N/F      with
                                ORDER UNIT: BX

10 DOXORUBICIN HCL 50MG/VIL (PF) INJ  INJ AN200
Enter choice or press return to continue: ^NDC
Unable to match . . . enter NDC Code <WITH DASHES>:
```

If a match cannot be made using the first word, longest word, and/or trade name(s), or you skip to the NDC prompt, you will be asked to enter an NDC number. The required format is

Manufacturer code	-	Product code	-	Package code
(1 - 6 characters)		(1 - 4 characters)		(1 - 2 characters)

If an NDC is entered in the wrong format or <RET> is entered, the software will not attempt a match. If a match is made, the following prompt will be displayed:

```
Display ingredients for this NDF drug?      N//
```

If you enter “Y” (YES), the software will display the ingredients of the matched drug. This additional information may assist in properly identifying correct matches.

EXAMPLE: Incorrect NDC Entered

```

Match local drug  AMMONIA, AROMATIC SPIRITS N/F              N/F      with
                                ORDER UNIT: BT

PACKAGE TYPE: BOTTLE
< Enter "Y" for yes >
< Enter "N" for no >
< Press return for next drug or "^" to quit>          OK? : N

```

When attempts at matching a drug using the local drug name, trade name, and the NDC have failed, you will be prompted to enter a VA Generic Name. The software will search the National Drug File looking for a match to this name. If several possible matches are found, they will be listed and you will be asked to choose a VA product name from that list. Once a match is chosen, you will be prompted to choose a package size and a package type.

EXAMPLE: Match by VA Generic Name

```

Match local drug  VAPONEPHRIN SOLN (30ML)                  N/F      with

```

It is not necessary for you to match the entire local DRUG file with the National Drug File at one time. You may exit the option at any time during the process by entering an up arrow (^) and <RET>. The internal local DRUG file number of the last drug matched will be saved and the next time *Match Local Drug File With National File* option is executed, you will be prompted to start where you exited to continue with the next drug. This prompt does not appear the first time the option is executed; however, it will appear each subsequent time. This allows you to start the matching process at the beginning of the local DRUG file or resume matching at the point the matching process previously stopped. Should a drug be mismatched during this option, you can exit at any time and choose *Rematch / Match Single Drugs* option to correct the mismatch.

2.0 Verify Matches

This option allows you to loop through the list of matched but unverified drugs and verify each one. It is not necessary to verify all matches at once. You can press the Return key to skip any entries you do not want to verify. This option can be used any time after drugs from the local DRUG file have been matched with drugs in the National Drug File using the options *Match Local Drug File With National File*, *Rematch / Match Single Drugs*, or *Automatic Match of Unmatched Drugs*.

All matched drugs must be verified. Unverified matches are stored in the NATIONAL DRUG TRANSLATION file, and will not merge until they are verified. To ensure accuracy one individual should match the drugs and another verify the matches.

Print *VA Product Names Matched* report to have a list of unverified matched drugs in the same order they will appear on the screen for verification.

EXAMPLE: Verify Match

Select National Drug File Menu Option: **2** Verify Matches

```

3.0 Rematch /Match Single Drugs [PSNDRUG]

This option allows you to rematch entries which are incorrectly matched or could not be matched automatically. *Report of Attempted Match Drugs* will list those items which the software attempted to match but could not; it should be printed before this option is executed. This option may be used until all entries in the local DRUG file that can be matched have been matched. It should be used to match any new drug added to the local DRUG file. This option screens for inactive date and searches the DEA/SPECIAL HANDLING field to determine if one of the following values exists in the field:

0 (zero)	-Manufactured	in	Pharmacy
I	-Investigational		Drug
M	-Bulk Compound Item		

Notice that unlike *Match Local Drug With National File* this routine does not screen on supply items. This allows supply items to be matched. The matching process in this option follows the same process as the non-automatic matching part of *Match Local Drug With National File*.

You **must** verify all matches made with this option. Failure to verify a drug that has been matched will prevent that drug from being merged when the *Merge National Drug File Into Local File* option is executed.

EXAMPLE: Rematch Manually Classed Drugs

Select National Drug File Menu Option: 3 Rematch / Match Single Drugs
 Enter name of drug from your local drug file and a match
 with the National Drug File will be attempted.
 Press return at the "Select DRUG GENERIC NAME: " prompt to exit.
 Select DRUG GENERIC NAME: LIDOCAINE 2% INJ. 20ML
 This drug has been manually classed but not matched (merged with NDF).
 Do you wish to match/rematch it? N// Y
 Match local drug LIDOCAINE 2% INJ. 20ML.

Remember, these matches must be verified using the options "Verify Matches" or "Verify Single Match" and then merged using the option "Merge National Drug File Data Into Local File".

4.0 Verify Single Match [PSNVER]

This option allows you to verify a single, selected match rather than looping through all matched, unverified drugs. You will be prompted for the drug name from the local DRUG file.

All matched drugs must be verified. Unverified matches are stored in the NATIONAL DRUG TRANSLATION file and will not merge until they are verified. To ensure accuracy one individual should match the drugs and another verify the matches.

EXAMPLE: Verify Single Match

```
Select National Drug File Menu Option: 4 Verify Single Match
Enter name of drug from your local drug file and if the
drug has been matched, you will be asked to verify the match.
Press return at the "Select DRUG GENERIC NAME: " prompt to exit.

5.0 Merge National Drug File Data into Local File [PSNMRG]

Before proceeding you should contact the IRM Site Manager to back up the local DRUG file and the NATIONAL DRUG TRANSLATION file. Back-up should be done each time prior to executing this option.

This option merges the matched/verified data from the NATIONAL DRUG TRANSLATION file into the local DRUG file. As the merge is taking place, the software will print a report listing any drugs in the NATIONAL DRUG TRANSLATION file that were not merged (referred to as errors to the merge. Errors are defined as the entries in the NATIONAL DRUG TRANSLATION file that do not have corresponding matches in the local DRUG file. If no errors exist, the report will say "No Errors Found".

You may execute this option at the conclusion of the entire matching/verifying process or after a section of the local DRUG file has been matched/verified. It is not important that the entire matching or verifying process be complete since only the matched and verified drugs in the NATIONAL DRUG TRANSLATION file will be merged. There must be at least one matched and verified drug in the NATIONAL DRUG TRANSLATION file for the merge to be completed successfully.

You can determine the time that the report will print. To delay the execution of this option, enter the letter "Q" at the "Select Printer" prompt and you will be prompted to queue the report to the printer. Please refer to "How to Work with the System" in Appendix A of this manual for instructions on printing.

Merging the NDF fields into the local DRUG file will not change the contents of the local GENERIC NAME field. You may wish to edit this field to make the local name match the NDF name.

EXAMPLE: Selecting "Merge National Drug File Data into Local File

Select National Drug File Menu Option: 5 Merge National Drug File Data Into Local File

This option will merge NDF fields into your local drug file. This will also produce an Error Report for entries in the translation file which are not in the local file if they should exist. These exceptions will not be merged.

You may queue this report if you wish.

Select Printer: HERE HERE

6.0 National Drug File Reports Menu [PSNSUBM]

This option is a sub-menu containing the following reports:

1. Local Drug File Report [PSNLDG]
2. Report of VA Generic Names from National Drug [PSNVAGN]
3. Report of Attempted Match Drugs [PSNEXC]
4. VA Product Names Matched Report [PSNPFN]
5. Local Drug With No VA Drug Class Report [PSNOCLS]
6. VA Drug Classification [PSNCLS]
7. NDF Info From Your Local File [PSNRPT]
 8. Supply (XA000) VA Class Report [PSNSUPPLY]
9. Manually Classed Drugs Report [PSNMCLS]
10. Local Drugs With NO Match to NDF Report [PSNONDF]
11. Formulary Report [PSNFRMLY]

Option is locked with **PSNMGR** key

The following pages contain a description of each report and an example of how it is used.

6.1 Local Drug File Report [PSNLDG]

This option generates a report containing selected information about drugs in the local DRUG file. The report prints the local drug name, inactive date, NDC number, and any assigned DEA (Drug Enforcement Agency) / Special Handling code(s). This report is valuable for determining which drugs have NDC numbers assigned to them.

This report requires 132 columns. You can print the report immediately, or delay printing until a later time.

EXAMPLE: Local Drug File Report

Select National Drug File Reports Menu Option: 1 Local Drug File Report
This report gives you a printed copy of the local drug name, inactive date, NDC, and the DEA value. This report requires 132 columns.
You may queue the report to print, if you wish.

6.2 Report of VA Generic Names from National Drug [PSNVAGN]

This option prints a report of VA generic names from the National Drug File. You can print all or a specified range of names. This report might be useful during the match and verify options. If you cannot find a match and are asked to type in a VA generic name, you can use this list to find the correct generic name. VA generic names with more than one ingredient are given alphabetically by ingredient (e.g., acetaminophen/butalbital/ caffeine/codeine).

You can print the report immediately, or delay printing until a later time. Please refer to "How to Work with the System" in Appendix A of this manual for instructions on printing.

EXAMPLE: Sample from Report of VA Generic Names from National Drug

Select National Drug File Reports Menu Option: 2 Report of VA Generic Names
From National Drug

This report gives you a printed copy of the VA Generic Names from the National Drug File. This report may assist you in the matching process.
You may queue the report to print, if you wish.

ACETAMINOPHEN/CAFFEINE/CHLORPHENIRAMINE/HYDROCODONE/PHENYLEPHRIN
```

6.3 Report of Attempted Match Drugs [PSNEXC]

This option generates a report listing all drugs you attempted to match, but for which a match could not be made during the matching process. Even though these drugs were not matched, the software "flagged" each of these drugs and an entry was made in the NATIONAL DRUG TRANSLATION file.

This report will include the contents of the DEA/SPECIAL HANDLING field if the field contains one of the following values:

0 (zero)	- Manufactured in Pharmacy
I	- Investigational Drug
M	- Bulk Compound Item

The report will also include any **inactive** dates found in the local DRUG file.

This report should be printed after the option *Verify Matches* is executed and before the *Merge National Drug File Data Into Local File* option is executed. This is a cumulative report and will include all entries from the very beginning of the matching process until each drug is manually classed. Once a drug has been manually classed, it is automatically deleted from the report.

You may print the report immediately, or delay printing until a later time.

EXAMPLE: Report of Attempted Match Drugs

Select National Drug File Reports Menu Option: 3 Report of Attempted Match Drugs

This report should be run after the menu option "Verify Matches" and before the menu option "Merge National Drug File Data Into Local File". It gives you a hard copy of the items from your local file for which a match was attempted, but no match was made from the National Drug File. You may queue the report to queue if you wish.

Select Printer: HERE HERE

BEPRIDIL STUDY CAPSULES, 100MG.		I

6.4 VA Product Names Matched [PSNPFN]

This option generates a report listing all drugs that have been matched. The report is not cumulative and will not include entries that have been previously merged into the local DRUG file. The *VA Product Names Matched* report can be printed before and/or after the menu option *Verify Matches*. It should be printed and reviewed before the *Merge National Drug File Data Into Local File* option is executed. This report may also be printed after the auto-match process to review what was matched. It generates a hard copy of the matches selected in the menu option *Match Local Drug File With National File* and the menu option *Verify Matches*.

The data for this report is stored in the NATIONAL DRUG TRANSLATION file. If a matched entry has not been verified, it will appear on the report with a special notation "NOT VERIFIED." (Refer to the first entries on the following sample report.) User names will only print on the report when those names change; the user who began the automatic match by NDC process will have his or her name printed on the report for those matches.

After reviewing this report, incorrect matches may be rematched by using the menu option *Rematch / Match Single Drugs*.

This report requires 132 columns. You may print the report immediately, or delay printing until a later time.

EXAMPLE: VA Product Names Matched Report

Select National Drug File Reports Menu Option: **4** VA Product Names Matched Report

This report can be run before and/or after the menu option "Verify Matches". It should be run before the menu option "Merge National Drug File Data Into Local File". This report may also be run after the auto-match process to review what was matched. It generates a hard copy of the matches selected in the menu option "Match Local Drug File With National File" and the menu option "Verify Matches." This report requires 132 columns. You may queue the report to print, if you wish.

6.5 Local Drugs with No VA Drug Class Report [PSNOCLS]

This option generates a report of drugs from the local DRUG file which have no VA drug classification. It will print only the active drugs in the file. This report should be generated after using the *Merge National Drug File Data Into Local File* option. You may wish to print this report **before** and **after** executing the *Allow Unmatched Drugs To Be Classed* option.

This report will display the contents of the DEA/SPECIAL HANDLING field if the field contains one of the following values:

0 (zero)	-Manufactured in Pharmacy
I	-Investigational Drug
M	-Bulk Compound Item

You can print the report immediately, or delay printing until a later time. Please refer to "How to Work with the System" in the appendices of this manual for instructions on printing.

EXAMPLE: Local Drugs with No VA Drug Class Report

Select National Drug File Reports Menu Option: 5 Local Drugs with No VA Drug Class Report

This report should be run after executing the menu option "Merge National Drug File Data into Local File". It may be useful to print this report before and after executing the "Allow Unmatched Drugs To Be Classed" option. It gives you a hard copy of the drugs from your local drug file which are "active" and have no VA Drug Classification.

You may queue the report to print, if you wish.

6.6 VA Drug Classification Report [PSNCLS]

This option generates a report of all VA Drug Classification Codes and Classes. You are given the option of having the classification descriptions printed in the report. You can choose to print all of the drug classifications or a range of classifications. In the following example, the “START WITH” and “GO TO” prompts refer to an alphabetical range in the classification code. Refer to “VA Drug Classification System” in the appendices for more information, including a complete *VA Drug Classification* report with class descriptions.

You may print the report immediately, or delay printing until a later time. Please refer to “How to Work with the System” in the appendices of this manual for instructions on printing.

EXAMPLE: VA Drug Classification Report

Select National Drug File Reports Menu Option: 6 VA Drug Classification

This report will display the VA Drug Classification code and class name.

6.7 NDF Info from Your Local Drug File [PSNRPT]

This option generates a report containing information for a given range of drugs or for all drugs that have been merged. This option should be executed after the *Merge National Drug File Data Into Local File* option has been completed. The report contains data that is stored in the NDF fields of the local DRUG file. Any drugs that do not contain NDF information (i.e., the drug has not been matched, verified, and merged) will be ignored. In the following example, the “START WITH” and “GO TO” prompts refer to an alphabetical range in the GENERIC NAME field.

To print a list of drugs by VA Drug Classification, you can use the *Formulary Report* option or VA FileMan.

You can print the report immediately, or delay printing until a later time.

EXAMPLE: NDF Info from Local Drug File

Select National Drug File Reports Menu Option: 7 NDF Info From Your Local Drug File

This report gives a printed copy of the drugs from your local drug file that have been matched to the National Drug File. This report requires 132 columns. You may queue the report to print, if you wish.

6.8 Supply (XA000) VA Class Report [PSNSUPPLY]

This option generates a report of all the items from the local DRUG file which have an "XA" VA Drug Classification. It will print only the active items in the file, and will sort by local DRUG file generic name. With installation of versions 2.0 and 3.1 of the National Drug File software package, you will have installed a newly re-structured VA DRUG CLASS file. One of the classifications which has been greatly expanded is the XA000 class. This report will allow you to have a hard copy of the items in the local file which have an "XA" class, and will assist you in reviewing and re-classing the items (use option *Re-class Supply Items*). You may use this report as a worksheet for re-classing.

You may print the report immediately, or delay printing until a later time. Please refer to "How to Work with the System" in the appendices of this manual for instructions on printing.

EXAMPLE: Supply (XA000) VA Class Report

Select National Drug File Reports Menu Option: 8 Supply (XA000) VA Class Report

This report should be run if you have already classed your local drugs/items using Version 1.0 of NDF. After the installation of Version 2.0 of NDF and the VA DRUG CLASS file is re-installed, you may wish to re-class your local items with an "XA" classification using the newly expanded "XA000" classification. It gives you a hard copy of the items from your local drug file which are "active" and have an "XA" VA Drug Classification. You may queue the report to print, if you wish.

6.9 Manually Classed Drugs Report [PSNMCLS]

This option generates a report, listing all active drugs in the local DRUG file that have been manually assigned a VA Drug Classification. The report will sort alphabetically by local drug generic name and will exclude supply items which have been assigned an "XA" classification.

You may print the report immediately, or delay printing until a later time. For more information, refer to "How to Work with the System" in the appendices .

EXAMPLE: Manually Classed Drugs Report

Select National Drug File Reports Menu Option: 9 Manually Classed Drugs Report

MANUALLY CLASSED DRUGS REPORT

6.10 Local Drugs with No Match to NDF Report [PSNONDF]

This option generates a report that contains entries in your local DRUG file with no match to National Drug File. You can print all drugs or only those marked for Outpatient Pharmacy use.

EXAMPLE : Local Drugs with No Match to NDF Report

Select National Drug File Reports Menu Option: 10 Local Drugs With NO Match to NDF Report

This report should be run after executing the menu option "Merge National Drug File Data Into Local File". It gives you a hard copy of the drugs from your local DRUG file which are "active" and have no match to NDF. You have the choice to print ALL drugs or only drugs marked for Outpatient use. If you answer "yes" to the question, you will print all. If you answer "no", you will print only Outpatient use drugs.

You may queue the report to print, if you wish.

Do you wish to print ALL drugs from your local file?
Enter Yes or No: NO

Select Printer: HERE HERE

LOCAL DRUGS WITH NO MATCH TO NDF

Date printed: MAY 12,1994

Page: 1

NUMBER	LOCAL DRUG GENERIC NAME	MANUAL CLASS
2356	ACETIC ACID 1/4% IRRIGATION (1000ML)	IR100

6.11 Formulary Report [PSNFRMLY] * LOCKED

This option is locked with the **PSNMGR** key, so only users with the **PSNMGR** key can access it. This report gives you a printed copy of formulary drugs from your local file with synonyms not marked as quick codes. You can print by Generic Name/Tradename (Example 1) or VA Class Code (Example 2). If you choose to print by VA Class code, the software will ask you to pick a range of VA Drug Class Codes.

Note: This report should only be run **after** executing the NDF software.

You may print the report immediately, or delay printing until a later time. Please refer to "How to Work with the System" in the appendices of this manual for instructions on printing.

EXAMPLE 1: Formulary Report Sorted by Generic Name/Tradename

Select National Drug File Reports Menu Option: 11 Formulary Report

This report gives you a printed copy of formulary drugs from your local file with synonyms not marked as quick codes. You are asked first to type in a title for this report. You are then asked to print by Generic Name/Tradename or VA Class Code. If you choose to print by VA Class Code, it will ask you to pick a range of VA Drug Class Codes. Only active drugs will print. Drugs with a future inactive date will print as well. You may queue the report to print, if you wish.

Enter title for report: HOSPITAL// VA ISC

You may print by DRUG GENERIC NAME/TRADENAME or VA CLASS CODE.
Enter a <RET> or "G" to print by DRUG GENERIC NAME/TRADENAME or
"C" for VA CLASS CODE.

Print by:

7.0 Automatic Match of Unmatched Drugs [PSNAUTO]

Version 3.1 has an updated data base and this option allows automatic matching by NDC of newer FDA-released drugs in your local file which are manually classed, or have no VA Class assigned. This option proceeds through the local DRUG file and attempts to match each drug encountered with a drug in the National Drug File. When a match is made, the drug is added to the NATIONAL DRUG TRANSLATION file and must be verified and merged.

Before the automatic matching begins, the below prompt:

```
AUTOMATIC MATCH by NDC Code process will begin. It will attempt to match
all items that are not presently MATCHED to the National Drug File.
Are you sure you want to continue?  N//
```

will be displayed on the screen. If you answer “YES”, the automatic matching process will begin and you will proceed as described below. If you answer “NO”, or press the Return key, you will exit from the option.

It is **extremely important** that as many drugs in the local DRUG file as possible have correct NDCs assigned to them. If the NDC fields in the local DRUG file are complete and accurate, the overall effectiveness of the automatic matching process will be greatly improved. If a drug’s NDC in the local DRUG file matches a like NDC in the National Drug File, a match will be made. These matches must be verified and merged. The VA Class assigned by the matching process will override any class previously assigned.

This option will screen on inactive date.

EXAMPLE: Automatic Match of Unmatched Drugs

Select National Drug File Menu Option: 7 Automatic Match of Unmatched Drugs

This option will attempt to automatically match by NDC code, drugs which have not been matched to the National Drug File. These matches must be verified and merged.

```
AUTOMATIC MATCH by NDC Code process will begin. It will attempt to match
all items that are not presently MATCHED to the National Drug File.
```

```
Are you sure you want to continue ?  N// Y.....
.....
```

8.0 Inquire to Local Drug File [PSNVIEW]

This option allows you to view the local DRUG file by Generic Name/Synonym or VA Drug Class Code. If you choose a VA Drug Class Code, you may enter either the code or the class name. For VA Drug Class Code, the software will sort by the least expensive price in the PRICE PER DISPENSE UNIT field. It will display the GENERIC NAME, NATIONAL DRUG CLASS, PRICE PER DISPENSING UNIT and the MESSAGE fields. Only active formulary drugs can be viewed.

EXAMPLE: Inquire to Local Drug File Option/Generic Name Chosen

Select National Drug File Menu Option: 8 Inquire To Local Drug File

You may look-up by DRUG GENERIC NAME or VA CLASS CODE

                                VA PRODUCT NAME:  ACETAMINOPHEN 100MG/ML DROPS,ORAL
                                PK SIZE:  OTHER      PK TYPE:  OTHER
                                VA PRINT NAME:  ACETAMINOPHEN 100MG/ML DROPS      VA DISPENSE UNIT:  ML
                                TRANSMIT TO CMOP?: YES
```

10.0 Allow Unmatched Drugs to be Classed [PSNSTCL]* LOCKED

It will be helpful to print *Local Drugs With No VA Drug Class* report before executing this option. This option is locked, so only users with the **PSNMGR** key have access. There will be some drugs in the local DRUG file that cannot be matched. Examples are investigational drugs, supply items, and drugs that are manufactured on site. You may use this option to enter the local DRUG file and assign VA classifications to these drugs. Refer to "VA Drug Classification System" in the appendices of this manual for VA Drug Classification Descriptions and Classification Scheme.

Note: This option should not be run until at least one merge using the menu option *Merge National Drug File Data Into Local File* has been executed.

There are two sub-options to this option. You will be prompted to answer the question, "Do you wish to automatically loop through all unmatched drugs?" If you answer "NO", you may class one drug at a time by entering local drug generic name or internal number. If you answer "YES", the software will loop alphabetically through all drugs that do not have an inactive date and have not been matched, verified, and merged.

If the drug you select was previously classified, the present classification is displayed as a default. You can accept the default by pressing the Return key, or you can enter a new classification.

EXAMPLE: Allow Unmatched Drugs to be Classed (Single Drug)

Select National Drug File Menu Option: 10 Allow Unmatched Drugs To Be Classed

This option allows a VA Drug Classification to be entered for a drug in your local drug file, however, if the drug has been classed through "the National Drug File merge procedure" you cannot change it!

Do you wish to automatically loop through all unmatched drugs?

<Reply Y,N or "^" to quit> : N

Select DRUG GENERIC NAME: CALAMINE LOTION

1 CALAMINE LOTION (OZ) DE900

2 CALAMINE LOTION, 4OZ BT DE900 USE FOR INPATIENT WARD STOCK

CHOOSE 1-2: 1

Select VA DRUG CLASS CODE: DE900 // <RET>

Select DRUG GENERIC NAME:

EXAMPLE : Allow Unmatched Drugs to be Classed (Loop)

Do you wish to automatically loop through all unmatched drugs?

```
<Reply Y,N or "^" to quit> : Y
ABSORBABLE GELATIN FILM (EACH)
  Select VA DRUG CLASS CODE: XA900 // <RET>
ABSORBABLE GELATIN SPONGE ,SZ 100,6/BX
  Select VA DRUG CLASS CODE: XA900 // <RET>
ABSORBABLE GELATIN SPONGE,SZ 12X7,12/BX
  Select VA DRUG CLASS CODE: XA900 // <RET>
ACCUTANE 20MG
  Select VA DRUG CLASS CODE: DE751
ACE BANDAGE,3 IN,ELASTIC
  Select VA DRUG CLASS CODE: XA100 // <RET>
ACE BANDAGE,4 IN,ELASTIC
  Select VA DRUG CLASS CODE: XA100 // <RET>
ACE BANDAGE,6 IN,ELASTIC
  Select VA DRUG CLASS CODE: XA100 // <RET>
ACEBUTOLOL 200MG CAP
  Select VA DRUG CLASS CODE: CV100 // <RET>
ACEBUTOLOL 400MG CAP
  Select VA DRUG CLASS CODE: CV100 // ^
```

You can stop the looping process at any time by entering an up-arrow (^) and pressing the Return key at the "Select VA DRUG CLASS CODE" prompt. The software will flag the last drug you classified and will begin the loop with this drug when you resume the looping process. This will allow you to review the last drug classified before continuing.

If a drug has **no default classification** and you enter <RET> rather than a class, the software will return you to the main menu.

EXAMPLE: Loop Interrupted When No Default Class and No Value Entered

Do you wish to automatically loop through all unmatched drugs?

```
<Reply Y,N or "^" to quit> : Y
ABSORBABLE GELATIN FILM (EACH)
  Select VA DRUG CLASS CODE: XA900 // <RET>

- 9Allow Unmatched Drugs To Be Classed
- 10 Re-Class Supply Items

Select National Drug File Menu Option:

The software will not allow you to reassign the VA Classification to a drug that has already been matched, verified, and merged.

EXAMPLE: Attempt to Class Item Already Matched, Classed, and Merged

Select DRUG GENERIC NAME: SODIUM METHOHEXITAL 5GM S.P. CN202 N/F
SORRY, CLASSIFICATION CANNOT BE CHANGED
Select DRUG GENERIC NAME:

After this option has been completed, print and review *Local Drug With No VA Class* report.

Note: To change the VA Drug Classification of a drug previously matched automatically by NDC, first attempt to rematch the drug using the *Rematch / Match Single Drugs* option. If that fails, classify the drug manually using this option.

11. Print a PMI Sheet

This option allows you to print Patient Medication Information Sheets. It also creates the file to hold the Information Sheets.

These medication information sheets can be provided to patients, explaining how and why to take a medication and the possible side effects. The information supplied in the Patient Medication Information Sheets is supplied by The United States Pharmacopeial Convention, Inc. (USP). This information is copyrighted and is updated periodically to provide new medication information sheets and changes to existing sheets.

EXAMPLE: Print a PMI Sheet

Select National Drug File Menu Option: Print a PMI Sheet

Select DRUG GENERIC NAME: POTASSIUM IODIDE 300MG E.C.T

On-Line Documentation

Intranet

The NDF homepage contains updated documents. These can be accessed via VA's intranet connection at the following address.

http://www.vista.med.va.gov/softserv/clin_nar.row/pharmndf/index.html

On-screen Help

For on-screen help while using the program, enter one question mark (?). For more information, enter two question marks (??).

Entering three question marks (???) at the "Select National Drug File Menu Option" or "Select National Drug File Reports Menu Option" prompt gives a description of each option.

Data Dictionaries

The Data Dictionaries (DDs) are considered part of the on-line documentation for this software application. You should print the DDs for the following files as soon as the software has been installed and initialized:

50	Drug
50.416	Drug Ingredients
50.6	National Drug
50.605	VA Drug Class
50.606	Dosage Form
50.607	Drug Units
50.608	Package Type
50.609	Package Size
50.612	National Drug Translation
51.2	Medication Routes
55.95	Drug Manufacturer
56	Drug Interaction
59.7	Pharmacy System

Use VA FileMan *List File Attributes* option to print the DDs. Use the listing format that fits your needs. In most cases the "BRIEF" listing format will include all necessary information. If you do not have VA FileMan access, contact the IRM staff to have the DDs printed.

EXAMPLE: Print Data Dictionaries Using VA FileMan

```
VA Fileman 18
Select OPTION:      8          LIST FILE ATTRIBUTES
OUTPUT FROM WHAT FILE:  DRUG
Select SUB-FILE:    <RET>
Select LISTING FORMAT: STANDARD// BRIEF
ALPHABETICALLY BY LABEL? NO// Y YES
DEVICE:      192                                RIGHT MARGIN:  80
```

The matching process in the *Match Local Drug File With National Drug File* option initially begins with automatic matching of the local drug with a drug in the NDF by NDC number. Therefore, you may wish to print a report from the local DRUG file to determine how many NDCs have been entered in the local file. If either version of the software has been installed and initialized, execute the option *Local Drug File Report* to obtain the report. If the software has not been initialized, the report will have to be printed using VA FileMan. If you do not have VA FileMan access, your IRM staff will have to print it for you.

EXAMPLE: Getting a Report of NDC Codes in the Local Drug File; Using VA FileMan (NDF Software Not Installed)

[Select VA FileMan Option from your main menu]

```
Select VA FileMan Option:  PRINT FILE ENTRIES
OUTPUT FROM WHAT FILE:    DRUG
SORT BY:      GENERIC
START WITH GENERIC NAME: FIRST// <RET>
FIRST PRINT FIELD: GENERIC NAME
THEN PRINT FIELD:  FSN/NDC
THEN PRINT FIELD:  <RET>
HEADING:  DRUG LIST// <RET>
DEVICE:    192                                RIGHT MARGIN: 132// <RET>
```

During the matching process it may be helpful to have a report containing every VA Product Name in the NDF. The following example shows how to print out this information. This printout contains both the VA GENERIC NAME and the associated VA PRODUCT NAME fields. You should note that while this report may be helpful to you, it is a very lengthy report. The report may be accessed through VA FileMan, as shown in the following example:

EXAMPLE: Getting a Report of VA Generic Names & VA Product Names from National Drug File Using VA FileMan

[Select the VA FileMan Option from your main menu]

```
Select VA FileMan Option:  PRINT FILE ENTRIES
OUTPUT FROM WHAT FILE:    NATIONAL DRUG
SORT BY:      VA GENERIC
START WITH VA GENERIC NAME: FIRST// <RET>
FIRST PRINT FIELD: VA GENERIC NAME;S1
THEN PRINT FIELD:  VA PRODUCT NAMES          (multiple)
      THEN PRINT:  VA PRODUCT NAMES SUB-FIELD: VA PRODUCT NAMES
      THEN PRINT:  VA PRODUCT NAMES SUB-FIELD: <RET>
THEN PRINT FIELD:  <RET>
```

HEADING: NATIONAL DRUG LIST// <RET>
 DEVICE: 192

RIGHT MARGIN: 132// <RET>

Using VA FileMan Templates

If you have placed the monthly prescriptions (new and/or refills) in VA FileMan templates, the following examples may assist you in reporting cost data. You may sort these templates instead of searching the entire PRESCRIPTION file. (e.g., [JULY 90 NEW RXs]). The first example illustrates the process for new prescriptions, and the second pertains to refill prescriptions by a user-specified date range.

If you have not placed the monthly prescriptions (new and/or refills) in VA FileMan templates, you can still use the VA FileMan Print option, but you must sort from the entire PRESCRIPTION file.

EXAMPLE: Cost Report for New Prescriptions

```
VA FileMan 18
Select OPTION: PRINT FILE ENTRIES

OUTPUT FROM WHAT FILE: PRESCRIPTION// PRESCRIPTION
SORT BY: RX #// [ JANUARY 91 NEW RXS [User enters
                                         Template Name here]

  WITHIN 'JULY 90 NEW RXS' NUMBER, SORT BY: DRUG:NATIONAL DRUG CLASS
START WITH NATIONAL DRUG CLASS: FIRST// AM000 [User specified]
GO TO NATIONAL DRUG CLASS: LAST// AM900Z [User specified]
  WITHIN DRUG: NATIONAL DRUG CLASS, SORT BY: +DRUG
  START WITH DRUG: FIRST// <RET>
  WITHIN DRUG, SORT BY: <RET>
STORE IN 'SORT TEMPLATE' : <RET>
FIRST PRINT FIELD: RX #
THEN PRINT FIELD: DRUG
  THEN PRINT SYNONYM SUB-FIELD: + QTY*UNIT PRICE; "RX COST"
    By 'UNIT PRICE', do you mean PRESCRIPTION 'UNIT PRICE OF DRUG'? YES// <RET>
THEN PRINT FIELD: <RET>
HEADING: PRESCRIPTION STATISTICS// Replace ...
  With JANUARY 91 AM000 NEW RX LIST
STORE PRINT LOGIC IN TEMPLATE: <RET>
START AT PAGE: 1// <RET>
DEVICE: 192 RIGHT MARGIN: 80// <RET>
```

EXAMPLE: Cost Report for Refill Prescriptions

```
VA FileMan 18
Select OPTION: PRINT FILE ENTRIES

OUTPUT FROM WHAT FILE: PRESCRIPTION// PRESCRIPTION
SORT BY: RX #// [ DEC 91 REFILL RXS [User enters
                                         Template Name here]

  WITHIN 'DEC 90 REFILL RXS' NUMBER, SORT BY: DRUG:VA DRUG CLASS POINTER
START WITH NATIONAL DRUG CLASS: FIRST// AM000 [User specified]
GO TO NATIONAL DRUG CLASS: LAST// AM900Z [User specified]
  WITHIN DRUG: NATIONAL DRUG CLASS, SORT BY: +DRUG
  START WITH DRUG: FIRST// <RET>
```

WITHIN DRUG, SORT BY: REFILL DATE MULTIPLE
REFILL DATE SUB-FIELD: REFILL DATE
START WITH REFILL DATE: FIRST// 12-1-91 DEC 1, 1990
[User specified range]
GO TO REFILL DATE: LAST// 12-31-91 DEC 31, 1991
[User specified range]

WITHIN REFILL DATE, SORT BY: <RET>
STORE IN 'SORT TEMPLATE' : <RET>
FIRST PRINT FIELD: RX #
THEN PRINT FIELD: DRUG
THEN PRINT SYNONYM SUB-FIELD: + QTY*UNIT PRICE; "RX COST"
By 'UNIT PRICE', do you mean PRESCRIPTION 'UNIT PRICE OF DRUG'? YES// <RET>
THEN PRINT FIELD: REFILL DATE multiple
THEN PRINT REFILL DATE SUB-FIELD: REFILL DATE
THEN PRINT FIELD: <RET>
HEADING: PRESCRIPTION STATISTICS// Replace ...
With DEC 90 AM000 REFILL RX LIST
STORE PRINT LOGIC IN TEMPLATE: <RET>
START AT PAGE: 1// <RET>
DEVICE: 192 RIGHT MARGIN: 80// <RET>

Glossary

Automatic Match by NDC
Matching

Pairing of a drug from the local DRUG file with a drug in the NATIONAL DRUG file with the same NDC number. This matching will be accomplished when the options *Match Local Drug File With National File* or *Automatic Match of Unmatched Drugs* are executed for the first time.

Active Drug

Drugs which contain no inactivation date in the INACTIVE DATE field of the local DRUG file.

Bulk Compound

An item manufactured by the Pharmacy in a larger quantity (gallons, pounds, etc.) and kept on hand to be dispensed in smaller quantities (ounces, grams, etc.). Identified by the code "M" in the DEA/SPECIAL HANDLING field of the local DRUG file.

DEA/SPECIAL HANDLING
Field

A field of the local DRUG file. Contains one or more codes representing special characteristics of a product.

DRUG File

See Local DRUG File

DRUG INGREDIENTS File

A file which contains individual generic drugs which are components of various drug products.

Error

In the National Drug File (NDF) software, an error is an entry in the NATIONAL DRUG TRANSLATION file that does not have a match in the local DRUG file.

File 50

VA FileMan file number for the local DRUG file.

FSN

Federal Stock Number a unique identifying number assigned by the Federal Supply System to a product (drug, supply, food item, etc.) for ordering and accounting purposes. Synonymous with the NSN (National Stock Number). One of the fields in the local DRUG file.

Investigational Drug	A new drug for which an investigational new drug application has been filed with, and approved by the FDA. Such a drug may be a new chemical compound which has not been released for general use and is not available through regular channels of interstate commerce, or it may be an approved drug put to new use with different dosage levels, routes of administration or new combinations of drugs. Identified by the code "I" in the DEA/SPECIAL HANDLING field of the local DRUG file.
Local DRUG File	File 50. Contains LOCAL GENERIC NAME, INACTIVE DATE, DEA/SPECIAL HANDLING, and NDC fields, as well as others. NDF software attempts to match products from this file with products in the NATIONAL DRUG file.
Local Generic Name	The first field in the local DRUG file. The identifying name for the item. It is this name that is routinely printed on prescription labels, medication administration records, inventory sheets, etc. The field name is GENERIC NAME. These terms are interchangeable throughout this document.
Manually Classed Drug	A drug from the local DRUG file which could not be matched to the NATIONAL DRUG file, but has been assigned a VA Drug Classification through the use of the <i>Allow Unmatched Drugs To Be Classed</i> menu option.
Manufacturer Code	The first portion of the NDC number (usually the first 4-6 digits). Identifies the manufacturer of the product.
Manufactured in Pharmacy	An item which is manufactured (or compounded) by pharmacy services on a prescription-by-prescription basis (as opposed to a bulk compound). Identified by the code "O" in the DEA/SPECIAL HDLG field of the local DRUG file.

National Drug File(NDF) Package or National Drug File(NDF) Software	This software package (see below for description of the file itself) attempts to match NATIONAL DRUG file entries with local DRUG file entries using both automatic matching and manual matching. The automatic matching is by NDC number only.
NATIONAL DRUG File (NDF)	Contains a list of available drug products. Includes specific information for each product, including trade name, NDC number, manufacturer, VA Drug Class code, dosage form, route of administration, strength, units, ingredients, ingredient strength and units, package code, package size, package type, VA product name, and VA generic name. NDF software attempts to match products from this file with products in the local DRUG file.
NATIONAL DRUG TRANSLATION File	A temporary file that is created by the NDF software. This file will contain information on drugs that have been matched, or for which a match was attempted.
ND (NDC Number)	National Drug Code: a unique number assigned to a drug by the manufacturer for identification purposes, usually in the format 1234-5678-90, in which the first part is the manufacturer's code, the second part is the product number, and the last is the code for the package size and type. One of the fields in the local DRUG file.
NDF	This abbreviation is for the phrase National Drug File. In this document, NDF refers to either NATIONAL DRUG file or National Drug File software. <i>See definitions on previous page.</i>
OTC	Over-The-Counter: a term used to describe a product which may be supplied or purchased without a physician's prescription. Identified by the code "9" in the DEA/SPECIAL HDLG field of the local DRUG file.

Package Code	The last portion of the NDC number (usually the last two digits). Identifies the package type and size in which the product is supplied.
Package Size	The actual (physical) amount of a drug in the individual package (i.e., 5000 capsules per bottle).
Package Type	The physical container in which a drug is supplied (i.e., bottle, vial).
Product Code	The second portion of the NDC number (usually the second four digits) that identifies the specific drug.
PSNMGR	The name of the primary menu option and of the key that must be assigned to the pharmacy coordinator and supervisors using the National Drug File software.
Supply Item	A non-drug item entered into the GENERIC NAME field of the local DRUG file that may be a prosthetic or expendable item such as ostomy supply, alcohol pads, syringes, bed pans, etc. Identified by the code "S" in the DEA/SPECIAL HDLG field of the local DRUG file.
Trade Name	A brand name. The name given to a generic product to distinguish it as one produced and sold by a specific manufacturer.
VA DRUG CLASS File	Contains the VA Drug Classification codes and their descriptions. Each product in the NATIONAL DRUG file has one of these codes assigned to it and stored with it in that file.
VA Generic Name	A name given to an item (drug, supply, etc.) in the NATIONAL DRUG file. It is this name which is matched with the entry in the GENERIC NAME (local generic name) field of the local DRUG file.

VA Product Name

The unique name assigned to each drug product in the NATIONAL DRUG file. This name includes strength, unit, and dosage form.
